CCP7 Newsletter – Table of Contents
1980 – 1991: Issues 1 – 16

Number 1 - May 1981			
P.L.Dufton	Non-LTE statistical equilibrium code	1:	2
M.G.Edmunds	Why synthesize stellar spectra ?	1:	3
A.E.Lynas-Gray	CCP7 Facilities: Real and Imaginary	1:	4
Number 2 - November 1981			
K.Butler & J.Giddings	Non-LTE line formation calculations	2:	2
M.Dworetsky & J.Jacobs	LTE spectrum synthesis program	2:	3
R.E.S.Clegg	Notes on cool stars and molecular spectroscopy	2:	4
R.E.S.Clegg	The SiO fundamental at 8 microns	2:	6
A.E.Lynas-Gray	LTE model atmosphere calculations in the STARLINK Vax 11/780	2:	7
A.E.Lynas-Gray	Future development of CCP7	2:	8
Number 3 - June 1982			
A.E.Lynas-Gray	Atomic data for astrophysics	3:	2
S.Caldwell	Spectral synthesis of late-type giants	3:	4
S.Adams	SPECTRUM: A new Starlink Spectral Analysis code	3:	5
A.E.Lynas-Gray	A Hitchhiker's guide to CCP7 software on the Daresbury Laboratory CRAY-1S	3:	8
Number 4 - November 1982			
A.E.Lynas-Gray	Utility CLISTs for manipulating CRAY-1S datasets	4:	2
A.E.Lynas-Gray	File transfers between the Daresbury Laboratory AS/7000 and STARLINK	4:	5
A.E.Lynas-Gray	Model atmospheres for Extreme Helium Stars computed with SAM1.4	4:	10
Number 5 - May 1983			
A.E.Lynas-Gray	Non-LTE Model atmospheres computed with revised electron collision-rate coefficients for hydrogen and helium	5:	3
R.E.S.Clegg	Observed and theoretical energy distributions for central stars of planetary nebulae	5:	10
D.J.Lennon & P.L.Dufton	Abundance analyses of early-type stars using CCP7 software	5:	20
S.Caldwell & R.J.Dickens	Abundance determinations in cool globular cluster giants	5:	28
A.E.Lynas-Gray	Relocation of the Daresbury Laboratory CRAY-1S to the University of London Computer Centre	5:	34
Number 6 - November 1983			
D.G.Hummer	Wind-blanketed non-LTE model atmospheres	6:	3
C.Jordan	Ionization equilibria	6:	10
D.R.Flower et al.	Chemistry of interstellar shocks I	6:	19
D.Williams	Chemistry of interstellar shocks II	6:	22
A.E.Lynas-Gray	CRAY-1S implementation of SSG and SYNTHS	6:	28
A.E.Lynas-Gray	University of London CRAY-1S service	6:	38
Number 7 - July 1984			
J.P.Harrington	Computing models for planetary nebulae	7:	1
M.J.Seaton	The Opacity Project (summary)	7:	12
T.W.Hartquist	On the photo-production of moderately ionized species in the Galactic halo gas	7:	14
T.W.Hartquist	Models of interstellar OH masers	7:	16
A.E.Lynas-Gray & M.Dworetsky	Preliminary determination of the helium abundance in the sdOB component of the eclipsing binary FF Aqr	7:	18
S.Falle et al.	Time-dependent ionisation calculations and their application to the evolution of radiative shocks	7:	27
A.E.Lynas-Gray	File transfer between the NAS 7000 at Daresbury and VAX computers	7:	29
A.E.Lynas-Gray	University of London CRAY-1S Service	7:	30
C.Jordan	Erratum	7:	31

Number 8 - November 1984

D.C.Abbott	Radiation-driven wind theory	8:	2
K.Butler	Non-LTE calculations for NIII in O stars	8:	9
D.J.Lennon	Abundance variations between young Galactic clusters	8:	21

Number 9 - July 1985

D.A.Williams	Modelling the chemistry in interstellar clouds	9:	2
G.D.Watt	Time-dependent chemistry: effect of the initial C/O ratio	9:	6
K.Butler & J.Giddings	Non-LTE Line formation: DETAIL and SURFACE	9:	7
A.E.Lynas-Gray	University of London CRAY-1S service	9:	31

Number 10 - November 1986

A.E.Lynas-Gray	Facilities for advanced research computing	10:	2
A.Bridger	Hydrodynamic models of W Virginis variables	10:	3
S.K.Leggett	Infrared observations of Vega and other bright stars: a discrepancy with model atmosphere calculations	10:	6
C.M.Sharp	Contribution of molecular absorption to stellar opacity	10:	7
C.S.Jeffery	STARMAKER: programs for calculating stellar evolution	10:	8
B.Byrne	QUB échelle spectrograph	10:	12

Number 11 - November 1987

P.L.Dufton	Model atmosphere analyses from within DIPSO	11:	3
A.E.Lynas-Gray	Simplified CRAY batch job submission from VAX/VMS	11:	8
P.G.Judge	Non-LTE line formation in moving media - MULTI	11:	19

Number 12 - February 1989

C.S.Jeffery	Atomic data for stellar atmospheres	12:	2
E.Biémont	Determination of f-values for lowly and moderately ionized atoms	12:	5
N.Grevesse	Atomic data and solar photospheric spectroscopy	12:	14
D.R.Flower et al.	The deuteration of interstellar molecules in dark clouds	12:	22
T.J.Millar	Codes for astrochemistry	12:	24
P.W.Hill	Stellar spectroscopic atlases on STARLINK	12:	25
A.Burgess et al.	A new aid for interpolating and assessing collision strengths	12:	26
C.S.Jeffery	The CCP7 program library - current status	12:	30
D.R.Flower	Molecular collision processes in interstellar clouds (abstract)	12:	34

Number 13 - November 1989

L.G.Stenholm	The core saturation technique and more	13:	2
K.J.Richardson	LVG and Monte-Carlo methods in star formation regions	13:	4
R.Padman	Observational results and requirments - star formation	13:	6
A.C.H.Glasse	Molecular line emission from the circumstellar envelopes of late-type stars	13:	9
R.J.Cohen	Interpreting observations of masers	13:	10
J.Lasenby	Non-linear molecules as probes of temperature and density	13:	12
J.Stutzki	Excitation mechanisms for molecular lines	13:	14
D.R.Flower	Collision-induced rotational transitions in ammonia	13:	16
M.J.Coe et al.	Modelling of the circumstellar envelopes of Be stars on transputers	13:	20
J.Anglada et al.	On the CO line profile fo a contracting protostellar envelope	13:	22
K.M.Gierens & J.Stutzki	An ONION shell radiative transfer model and its application to a low-J $^{12}CO/^{13}CO$ study of Orion A	13:	26
P.Schilke et al.	Vibrationally excited ammonia	13:	29
V.Grossman & H.Meyerdiecks	OH main-line anomalies in a high latitude molecular cloud	13:	35
A.C.H.Glasse	MULTI in spherical geometry	13:	38
R.J.Cohen	Compact maser sources (abstract)	13:	40

Number 14 - September 1990

A.Dalgarno	Molecular Clouds	14:	1
P.C.T.Rees	Voigt function bench marks	14:	9
M.J.Coe & M.Gorrod	Transputers and parallel architecture machines	14:	24
A.E.Lynas-Gray & C.S.Jeffery	Simplified UNICOS batch job submission from VAX/VMS	14:	30
C.S.Jeffery	CCP7GUEST - Accessing the CCP7 library: A user guide	14:	43

Number 15 - February 1991

R.F.Carswell	Quasar emission line radiation	15:	2
B.J.Wilkes	Quasar continua	15:	8
S.Collin-Souffrin	Propositions for an interpretation of the broad-line spectrum	15:	14
C.J.Zeippen	Photoionisation cross sections	15:	18
G.J.Ferland	The BLR today	15:	23
H.Netzer	BLR Models: Gas distribution and anisotropic emission	15:	27
E.Perez et al.	An Atlas of 2-D transfer functions of the broad-line region	15:	31
N.Jackson	Modelling line profiles	15:	39
K.A.Berrington et al.	The Belfast atomic data bank, recommended data, and the Opacity Project data bank	15:	46
H.Lamers & C.S.Jeffery	SEI: An efficient and accurate method for calculating profiles from spherically expanding winds	15:	51

Number 16 - September 1991

D.Field	Workshop on radiative transfer in celestial masers	16:	1
G.Balint-Kurti	Collision cross sections and rate coefficients for maser modelling	16:	8
C.S.Jeffery	CCP7 program library news	16:	11
C.S.Jeffery	LTE_LINES: atomic data for LTE calculations	16:	17
C.S.Jeffery & P.C.T.Rees	Theoretical astrophyics subroutine library	16:	22
	General Index: Issues 1–16: 1980 – 1991	16:	31
